

COMPUTER SCIENCE 2024 SUMMER TASK

PART A

A large part of the Computer Science A Level is programming.

Please complete the course and activities below, up until lesson 50. You can complete all the lessons if you like. Please sign up for Replit if you don't already have an account. Your progress will be automatically saved which will serve as your evidence.

[100 Days of Code - The Complete Python Course - Replit](#)

PART B

It would be beneficial to learn and apply the basics of a version control system like GitHub. To understand the basics, follow the [Hello World Guide](#) and then read [GitHub for non-programmers](#). Once you have done this, your task is to start using GitHub to organise some of your previous files and projects and here with work online. It will take time to formulate a method of your own that allows you to organise information you create so you can recall it quickly, the sooner you start the practice the better.
